Subject: [External] Dominion's Long-Term Resource Plan

I am a Dominion customer and request that the PSC conduct a public hearing on Dominion's long-term resource plan.

Based on what I've seen in the plan, despite the imperative need to reduce fossil fuel use, there is no attempt to implement inclusion of clean energy power sources. Instead, the plan extends close dates for coal driven energy and relies totally on new gas plants to replace them. The exorbitant price of gas is not a concern to them, as they have had no problems getting continued rate increases that are absorbed by their customers who are unduly burdened by the expense.

Thank you for your consideration of this important matter.
